

Minutes of Meeting (MoM)

Meeting Date: February 06, 2026

Meeting Title: EDA Discussion

Team Members:

Kumar Mantha, 1002233682

Vandit Goel, 1002245699

Pratyaksh Mathur, 1002228261

Agenda

- Presented the EDA dashboard

Status report

- EDA completed.
- Building baseline models (in progress).

Findings

- The observed instances of excess gas usage support our hypothesis that temperature plays a significant role in driving gas consumption patterns.
- Seasonal and weekly trends are evident across several usage variables.
- Usage-2 represents the largest facility, which explains its higher scale of consumption compared to the others.
- Usage-2_1 is hypothesized to be an additional meter within the same facility, likely supporting heating operations during winter months. The decline in consumption after 2021 is likely attributable to the shutdown of certain buildings.
- The anomalies observed in December 2017, and early January 2018 are hypothesized to be the result of meter malfunction.
- Analysis of the Delivery vs. Usage gap is planned for inclusion in the second half of the project.
